FE examination : 2018/10

PE examination : 2019/10

I applied for the FE examination from mid 2018, after passing documents screening, I registered to take the examination in October, 2018. To prepare for the exam, I mainly used "FE Civil Review Manual" written by Lindeburg, and FE Handbook to review the past knowledge, together with do practices in "FE Civil Practice Problems" within about 3 months. I passed the FE examination after waiting for about 2 months.

After passing the FE examination, I wanted to take the PE examination as soon as possible but I missed the deadline of application for April, 2019. However, I have started preparing for the October 2019 examination since April. Similar to the preparation of the FE, I used almost 2 hours every day on average for review and study. I review mainly in "PE Civil Reference Manual" of Lindeburg for AM exam. I did not review too much for a PM exam because I am currently working in the field of Geotechnical Engineering and I am enjoying it. The day of the exam was very hard for me; however, I was happy that I finally could pass one of the most difficult examination.
